1 Project Plan

The project Liquid Level Monitoring System is to measure, monitor, and visualize the real-time liquid level inside a container, tank, or reservoir.

1.1 Topic

The project will display:

- Real-time visualization of sensor data
- Alerts and notifications for critical levels
- Historical trend viewing
- Device configuration controls
- Logging and reporting

Included:

- Boot to Qt
- Visualization widgets (graphs, bars, gauges).
- Communication with hardware via MQTT
- Real-time data update engine using signals/slots.
- Alerts UI with threshold settings.
- Data logging in CSV.
